

IH 8221 - FLAME PROOF TRIPLE SENSOR UV-IR FLAME DETECTOR FOR HAZARDOUS AREA APPLICATIONS

Fladet series IH8221 is an Ultra Violet and Infra Red Combined Flame proof Triple Sensor UV- IR Flame Detector suitable to be used in Hazardous areas. The detector makes use of both Infra Red and Ultra Violet radiations for effective & quick detection of Flame .

IR has a narrow spectral sensitivity of 3000 - 5000nm, insensitive to visible light. The Detector also make use of Ultra Violet Sensitive photo cathode for detection of flame. It has a narrow Spectral sensitivity of 185 - 260nm, insensitive to visible light and Solar Radiation.

It can be connected to any Standard Conventional Fire Alarm Panel or to any Annunciator or PLC or DCS through the Potential Free 'NO' contacts provided. Inbuilt Red LED is also provided for visible indication in case of Fire Situation. Flickering Green LED indicates the normal working condition of the detector.

IH8221 Flame Detector detects both UV & IR spectra emitted by fire. This Combination ensures to eliminate false alarms such as Sunlight, Lightening, Welding Arcs, Hot Body radiations and Halogen lamps & responds quickly to actual flaming fires.

ADVANTAGES

- ⇒ Rugged Explosion-Proof enclosure for Hazardous Environment
- ⇒ ISI Marked & PESO Approved.
- ⇒ Confirm to IS /ISO 7240-10 & EN54 -10
- ⇒ Easy to install and operate
- ⇒ High speed response
- ⇒ Free from False Alarms
- ⇒ Visual Indication for Normal & Fire condition
- ⇒ Low Maintenance.
- ⇒ Low Standby Current
- ⇒ Detectors does not require any special type Control Panel.
- ⇒ Swivel Mounting Base is provided for easy mounting at site.
- ⇒ The detector can be detected 1 Sq. ft fire at 25-35 metres distance. The response time of the detector is depends on the size of the fire, fuel type, distance and angle of fire. Small fires & greater distances normally require more response time.

APPLICATIONS

- ⇒ Flame Detectors are very effective & can be used in a number of applications including,
- ⇒ High-ceiling, Open spaced buildings such as ware houses and aircraft hangers.
- ⇒ Outdoor or semi outdoor areas where winds or droughts can prevent smoke from reaching a heat or smoke detectors.
- ⇒ Areas where rapidly developing flaming fires can occur such as aircraft hangers, petrochemical production areas, storage and transfer areas, Natural gas installations, etc.,
- ⇒ Paint booths & Paint shop Areas
- ⇒ Chemical Industries
- ⇒ Environment that are unsuitable for other type of detectors.
